INTRODUCTION

The NATIONAL ASSOCIATION OF REALTORS® *Profile of Home Buyers and Sellers* is an annual survey of recent home buyers and sellers who recently completed a transaction. This year marks the 40th anniversary of the flagship report. The annual report allows industry professionals to gain insight into detailed buying and selling behavior. Each iteration of the report is as unique as the economic, social, and demographic environment in which it is published.

This year, while marking its 40th anniversary, the report is especially unique. It includes an entire year of data in which buyers and sellers purchased or sold during the COVID-19 pandemic. The last year is especially distinctive as home buyers have entered a housing market with historically low housing inventory and historically high year-over-year home price gains. Buyers have continued to enter, despite the competition in the marketplace, and purchase homes. Buyers purchase a home not only for the desire to own a home of their own, but also for the desire to be closer to friends and family and the need for a larger home. The pandemic changed how our homes are used, as well as the location in which we bought homes. There was a jump in buyers who noted a top factor for their neighborhood choice was the proximity to friends and family. In past years, convenience to work and affordability had been top factors.

The information provided supplies understanding, from the consumer level, of the trends that are transpiring. This survey covers information on demographics, housing characteristics, and the experience of consumers in the housing market, as well as for those who are not yet able to enter the market. Buyers and sellers also provide valuable information on the role that real estate professionals play in home sales transactions.

The *Profile of Home Buyers and Sellers* report has been the leading industry source of trusted insight into consumer behavior for nearly four decades. It has grown and evolved to keep up with changing home buying trends and the need for more information. NAR first administered the survey in 1981 with just 59 questions. In 2021, the survey contained 129 questions. Although the report has evolved, data has been collected for more than three decades describing the demographic characteristics of home buyers and sellers, buyers and sellers' experience in the home

transaction process, as well as market characteristics including the use of real estate agents. One measure of how the market has changed is the manner in which the data is collected. In 1981, only a paper copy of the survey was offered. Today, recent home buyers can take the survey via paper or online, and in English or Spanish. Because of its long history and timely information available each year, the report is valued by REALTORS®, market analysts, and policymakers.

Data is collected from a nationally representative sample of recent home buyers who purchased a primary residence in the 12-month period between July 2020 and June 2021. Data is also representative of the geographic distribution of home sales. Consumer names are obtained from Experian, a firm that maintains an extensive database of recent home buyers derived from county records.

Among all buyers last year, the share of first-time home buyers grew to 34 percent from 31 percent. While first-time buyers have had record low interest rates, they have also faced a housing environment that has scarce inventory and rising home prices. Among all buyers, 31 percent paid the asking price for the home, while 29 percent paid more than the asking price.

Tightened inventory is affecting the home search process of buyers. Due to suppressed inventory levels in many areas of the country, buyers are typically purchasing more expensive homes as prices increase. The number of weeks a buyer searched for a home remained at only eight weeks. Many buyers took advantage of new virtual tours and virtual listings and used those in their search process. Buyers continue to report the most difficult task for them in the home buying process was just finding the right home to purchase.

Among sellers, the pandemic also may have spurred sellers to make a home trade. The top reasons to sell were the desire to be close to friends and family and because their home was too small. Tenure in the home dropped to eight years from 10 years. It is the largest single-year change in home tenure in the history of the data set. Historically, tenure in the home has been six to seven years, but had increased after the Great Recession to nine to 10 years. Among sellers, 46 percent purchased a larger home and 28 purchased the same size home.

November 2021

2021 Profile of Home Buyers and Sellers

Buyers needed the help of a real estate professional to help them find the right home and negotiate terms of sale. Eighty-eight percent of buyers used an agent to help them purchase a home. Sellers, as well, turned to professionals to price their home competitively, help market the home to potential buyers, sell within a specific timeframe, and fix up the home for sale. Ninety percent of sellers used an agent to sell their home. While the survey asked about iBuyers as a selling method, less than one percent of sellers used these online only programs. Only seven percent of sellers sold via For-Sale-By-Owner (FSBO), matching historic lows seen in past years.

This report provides real estate professionals with insights into the needs and expectations of their clients. What do consumers want when choosing a real estate professional? How do home buyers begin the process of searching for a home? Why do some sellers choose to forego the assistance of an agent?

The answers to these questions, along with other findings in this report, will help real estate professionals better understand the housing market and provide the information necessary to address the needs of America's real estate consumers.

The data set provides a wealth of data that is used to create a number of spin-off NAR reports including: *Home Buyer and Seller Generational Trends Report*, *Buyer Bios*, *Real Estate in a Digital Age*, *Veterans and Active Military Home Buyers and Sellers Profile*, *Profile of LGBT Buyers and Sellers*, *A Snapshot of Race and Home Buying in America*, *Downpayment Expectations and Hurdles to Homeownership*, and *Moving with Kids*.

2021 Profile of Home Buyers and Sellers

HIGHLIGHTS

Characteristics of Home Buyers

- First-time buyers made up 34 percent of all home buyers, an increase from last year's 31 percent.
- The typical first-time buyer was 33 years old this year, holding steady from last year, while the typical repeat buyer age continued to climb to an all-time high of 56 years old.
- Sixty percent of recent buyers were married couples, 19 percent were single females, nine percent were single males, and nine percent were unmarried couples.
- Eleven percent of home buyers purchased a multi-generational home, to take care of aging parents, because of children over the age of 18 moving back home, and for cost-savings.
- Eighty-two percent of buyers were White/Caucasian, seven percent were Hispanic/Latino, six percent were Asian/Pacific Islander, six percent were Black/African-American, and two percent identified as other.
- Eighty-nine percent of recent home buyers identified as heterosexual, four percent as gay or lesbian, two percent as bisexual, one percent prefer to self-describe and six percent preferred not to answer.
- Fourteen percent of recent home buyers were veterans and three percent were active-duty service members.
- At 28 percent, the primary reason for purchasing a home was the desire to own a home of their own. For first-time buyers, this number jumps to 65 percent.

Characteristics of Homes Purchased

- Fifteen percent of buyers purchased a new home, and 85 percent of buyers purchased a previously-owned home. In comparison, in 1989, 29 percent of buyers purchased a new home.
- Most recent buyers who purchased new homes were looking to avoid renovations and problems with plumbing or electricity at 36 percent. Buyers who purchased previously-owned homes were most often considering better overall value at 38 percent.
- Detached single-family homes continued to be the most common home type for recent buyers at 82 percent, followed by townhomes or row houses at seven percent. In 1981, 76 percent of homes were detached single-family homes.
- Senior-related housing held steady this year at 14 percent, with 16 percent of buyers typically purchasing condos and seven percent purchasing a townhouse or row house.
- The median distance between the home that recent buyers purchased and the home they moved from was only 15 miles.

- Convenience to friends and family was the second most important factor in influencing neighborhood choice, after quality of the neighborhood. This surpassed convenience to job and affordability, which were more important last year.
- Buyers typically purchased their homes for 100 percent of the asking price, with 29 percent purchasing for more than asking price.
- The typical home that was recently purchased was 1,900 square feet, had three bedrooms and two bathrooms, and was built in 1993.
- Overall, buyers expected to live in their homes for a median of 12 years, while 18 percent said that they were never moving.

The Home Search Process

- For 41 percent of recent buyers, the first step that they took in the home buying process was to look online at properties for sale, while 19 percent of buyers first contacted a real estate agent.
- Ninety-one percent of recent buyers found their real estate agent to be a very or somewhat useful information source.
- Buyers typically searched for eight weeks and looked at a median of eight homes, and viewed three homes only online.
- Nearly all buyers used online tools in the search process at 95 percent.
- When asked where their internet searches were conducted, home buyers were split; they typically conducted 50 percent of their search on a desktop/laptop and 50 percent on a mobile device(s).
- Ninety-four percent of recent buyers were at least somewhat satisfied with their recent home buying process.

Home Buying and Real Estate Professionals

- Eighty-seven percent of buyers recently purchased their home through a real estate agent or broker, and seven percent purchased directly from a builder or builder's agent.
- Having an agent to help them find the right home was what buyers wanted most when choosing an agent at 52 percent.
- Forty-seven percent of buyers used an agent that was referred to them by a friend, neighbor, or relative and 13 percent used an agent that they had worked with in the past to buy or sell a home.
- Seventy-three percent of buyers interviewed only one real estate agent during their home search.
- Ninety percent of buyers would use their agent again or recommend their agent to others.

2021 Profile of Home Buyers and Sellers

Financing the Home Purchase

- Eighty-seven percent of recent buyers financed their home purchase, down from 93 percent in 2003.
- The typical downpayment for first-time buyers was seven percent, while the typical downpayment for repeat buyers was 17 percent.
- For 61 percent of buyers, the source of the downpayment came from their savings. Fifty-six percent of repeat buyers cited using the proceeds from the sale of a primary residence, while 28 percent of first-time buyers used a gift or loan from friends or family for the downpayment.
- For first-time home buyers, 29 percent said saving for a downpayment was the most difficult step in the process.
- The majority of first-time buyers did make financial sacrifices to purchase a home. For those who did, the most common sacrifices buyers reported were cutting spending on luxury goods, entertainment, and clothes.
- Buyers continue to see purchasing a home as a good financial investment. Eighty-six percent reported they view a home purchase as a good investment.

Home Sellers and Their Selling Experience

- The typical home seller was 56 years old, with a median household income of \$112,300.
- For all sellers, the most commonly cited reason for selling their home was the desire to move closer to friends and family (18 percent), that it was too small (17 percent), and the neighborhood has become less desirable (11 percent).
- Sellers typically lived in their home for eight years before selling, the biggest one-year change in tenure since 1985.
- Forty-six percent of sellers traded up to a larger home and 28 percent purchased the same size home.
- Ninety percent of home sellers worked with a real estate agent to sell their home, seven percent sold via FSBO, and less than one percent sold via iBuyer.
- For recently sold homes, the final sales price was a median of 100 percent of the final listing price, the highest recorded since 2002.
- Recently sold homes were on the market for a median of one week, a drop from three weeks last year.
- Only 26 percent of sellers offered incentives to attract buyers, a drop from 46 percent of all sellers last year.
- This year, home sellers cited that they sold their homes for a median of \$85,000 more than they purchased it, a jump from \$66,000 last year.
- Ninety-two percent of sellers were at least somewhat satisfied with the selling process.

Home Selling and Real Estate Professionals

- Sixty-eight percent of sellers found their agent through a referral from a friend, neighbor, or relative or used an agent they had worked with before to buy or sell a home.
- Eighty-two percent of recent sellers contacted only one agent before finding the right agent they worked with to sell their home.
- Fifty-three percent of sellers used the same agent to purchase a home, as sell their home. A share which rises to 85 percent for sellers who purchased a new home within 10 miles.
- Eighty-nine percent of sellers listed their homes on the Multiple Listing Service (MLS), which is the number one source for sellers to list their home.
- Seventy-six percent of sellers reported that they provided the agent's compensation.
- The typical seller has recommended their agent twice since selling their home. Twenty-seven percent of sellers recommended their agent four or more times since selling their home.
- Eighty-nine percent said that they would definitely (74 percent) or probably (15 percent) recommend their agent for future services.

For-Sale-by-Owner (FSBO) Sellers

- Only seven percent of recent home sales were FSBO sales this year. This is slightly down from seven percent last year, and is a historical low share recorded since this report started in 1981.
- The majority of FSBO sellers, 57 percent, knew the buyer of the home.
- Within rural areas 12 percent sold via FSBO compared to four percent of sellers in urban areas.
- FSBOs typically sell for less than the selling price of other homes; FSBO homes sold at a median of \$260,000 last year, significantly lower than the median of agent-assisted homes at \$318,000.

CHAPTER 1:

Characteristics of Home Buyers

The NATIONAL ASSOCIATION OF REALTORS®'s *Profile of Home Buyers and Sellers* report has been the leading industry source of trusted insight into consumer behavior for nearly four decades. The information has been collected since 1981, which allows data trends to be traced over the years.

The share of first-time home buyers has been a key indicator of the market. In 2021, the share of first-time home buyers was 34 percent, an increase from last year's 31 percent. This figure remains below the historical norm of 40 percent of primary residence home buyers in the market.

By comparison in 1981, the share of first-time buyers was 44 percent. In 1987, the number fell to an all-time low of 30 percent, but jumped back to 44 percent in 1991. In 2010, with the federal government tax credit to help boost the home sales demand of first-time buyers, the share reached a peak at 50 percent—the highest in NAR's four decades of collecting this data. Since 2011, the share of first-time home buyers has been under the historical norm of 40 percent as buyers face tight inventory, rising home prices, rising rents, and high student debt loads.

The largest share of home buyers continues to be the 25 to 34 age group, accounting for 24 percent of all buyers. The median household income for 2020 increased to \$102,000, compared to \$96,500 in last year's report. The share of married couples decreased to 60 percent this year, the share of single females also slightly increased to 19 percent, and the share of single males held steady at nine percent—the same as last year. Thirty-one percent of all buyers had children under the age of 18 living at home.

As might be expected, 73 percent of first-time home buyers rented their previous living arrangement, while 76 percent of repeat buyers owned their previous residence. A steady share of first-time buyers, 21 percent, moved from a family or friend's home directly into home buying. Sixty-five percent of first-time buyers purchased for the desire to own a home of their own.

Chapter 1: Characteristics of Home Buyers

DEMOGRAPHIC CHARACTERISTICS OF HOME BUYERS

Exhibits 1-1 through 1-7

The demographics of home buyers continued to shift over the last several years due to both tightened credit conditions and the lack of inventory on the market, which are driving up home sales prices. The *Profile of Home Buyers and Sellers* has collected data on the median age of home buyers since 1981. The median age decreased this year to 45 years old, from 47 last year. However, the median age for repeat buyers increased slightly to 56 years old, the highest since 1981. The median age for first-time buyers remained at 33 years in 2021.

By comparison, the median age for all buyers in 1981 was 31 years. The median age for all buyers had predominantly been in the mid-thirties from 1985 to 2004 with brief years peaking at 41 in 1993, 40 in 2003 and 2005, and 45 in 2011 and 2017. From 2007 through 2010, the median age held steady at 39 years, but was broken in 2011 when it jumped up to 45 years, then reached the oldest median age (at 47 years for all buyers in 2019 and 2020) in the history of NAR collecting the data.

Similarly, the median age of first-time buyers was 29 in 1981. The median age for first-time buyers peaked at 36 years in 1993, then remained around 30 to 32 for over 20 years from 1995 to 2018. There is a jump in the median age for all buyers as the median age for repeat buyers has increased over time. In 1981, the median age for repeat buyers was 36. It was only that low once more in 1995, from which point it has steadily increased over the years. In 2011, it broke the 50-year mark and rose to a median of 53 years, the highest age in three and a half decades. The median age remained at 53 years in 2014 and 2015, declined to 52 years in 2016, and jumped back up to 54 in 2017, followed by 55 years in 2018, 2019, and 2020. The median age reached 56 years in 2021, the highest since 1981.

The largest share of home buyers continues to be in the 25 to 34 age group, accounting for 24 percent of all buyers this year, followed by 35 to 44 years at 22 percent, and 55 to 64 years at 17 percent, with the 65 to 74 years age group accounting for 16 percent and the 45 to 54 years age group accounting for 14 percent of total home buyers. Unsurprisingly, the 18-24 and 75 and over categories were the smallest, accounting for two and five percent of total home buyers respectively.

The median household income for 2020 increased this year to \$102,000 compared to \$96,530 in last year's report. Buyers in the West region had the highest incomes this year, followed closely by buyers in the Northeast. Buyers in the Northeast and Midwest regions tended to be moderately younger, while buyers in the West and South regions tended to be older.

The share of married couples decreased to 60 percent this year, down slightly from 62 percent. The share of single females rose slightly to 19 percent, and single males held steady at nine percent the past three years. Unmarried couples also remained at nine percent this year from nine percent the previous two years. Dual incomes from married couples tend to have stronger purchasing power than single buyers.

The *Profile of Home Buyers and Sellers* report has collected data on household composition since 1981, when the share of married couples accounted for 73 percent of all homes purchased, single females purchased 11 percent of homes, and single males 10 percent. The share of married couples peaked at 81 percent in 1985, then steadily declined over the years. In 2010, the share of married couples was at a low point at 58 percent of all homes purchased. Single females remained above 20 percent from 2005 to 2010, at which point the share started to decline, hovering at 16 percent from 2012 through 2014. The share of single male buyers hit a 35-year peak in 2010 at 12 percent before steadily declining to seven percent in 2017, but has been increasing to previous levels seen from 2012 to 2015.

Thirty-one percent of all buyers had children under the age of 18 living at home, the lowest share since 1981 and down from 33 percent last year. Eleven percent of home buyers purchased a multi-generational home—a home that had adult siblings, adult children over the age of 18, parents, and/or grandparents in the household. The top reasons for purchasing a multi-generational home were to take care of aging parents (29 percent), to spend time with aging parents (17 percent), children over the age of 18 moving back home (16 percent), and cost savings (16 percent).

RACE, ETHNICITY, LANGUAGE AND NATIONAL ORIGIN OF BUYERS

Exhibits 1-8 through 1-11, Exhibits 1-13 through 1-14, Exhibits 1-23 through 1-25

Down slightly from 83 percent last year, 82 percent of recent home buyers identified their ethnicity as White or Caucasian. The West continued to be more diverse, with 30 percent reporting themselves as a race other than White or Caucasian, and the Midwest reportedly had the least diversity. Single females were also the most diverse, as were families with children under the age of 18 living at home.

Twenty-nine percent of first-time home buyers identified as non-White or Caucasian, compared to 17 percent of repeat buyers. Eight percent of first-time buyers, compared to three percent for repeat buyers, reported a language other than English as their primary language. Fourteen percent of first-time home buyers,

2021 Profile of Home Buyers and Sellers

compared to eight percent for repeat buyers, reported being born outside of the United States.

Ninety-five percent of home buyers primarily spoke English in their homes which is down slightly from last year. Ninety-seven percent in the Midwest reported that English was the primary language spoken at home and 96 percent in the South. Ninety percent reported that they were born in the United States. Ninety-four percent were U.S.-born in the Midwest and 85 percent were U.S.-born in the West.

Eighty-nine percent of recent home buyers identified as heterosexual, four percent as gay or lesbian, two percent as bisexual, one percent prefer to self-describe, and six percent preferred not to answer. Recent home buyers also reported that 14 percent were veterans and three percent were active-duty service members.

DEMOGRAPHIC CHARACTERISTICS OF FIRST-TIME AND REPEAT HOME BUYERS

Exhibits 1-16 through 1-25

First-time home buyers increased to 34 percent of the market share (31 percent last year), and are below the historical norm of 40 percent among primary residence home buyers. Since 2011, the share of first-time home buyers has been suppressed. In 2015, it was the lowest share since 1987, when the share of first-time home buyers reported was 30 percent. The Northeast region had the largest share of first-time home buyers at 41 percent and the South had the smallest share at 30 percent.

The share of first-time buyers who were married couples was 50 percent, down from 52 percent last year, and married repeat buyers were down slightly at 66 percent from 67 percent the year before. The share of first-time buyers who were unmarried couples rose slightly to 17 percent. Thirty percent of first-time buyers reported having at least one child under the age of 18 living at home, compared to 32 percent for repeat buyers. The median age of first-time buyers stayed steady at 33 years and rose slightly to 56 for repeat buyers.

The median household income rose slightly for first-time buyers and for repeat buyers, although the gap between them varies greatly. First-time home buyers reported a median income in 2020 of \$86,500 (up from \$80,000 last year) and repeat buyers reported an income of \$112,500 (up from \$106,670 last year). Married repeat buyers have the highest income among all buyers at \$131,300. Increased median household income could suggest stricter financing that forces low income buyers out of the market and an increase in home prices, which has been restricting who can enter the market.

PRIOR LIVING ARRANGEMENT

Exhibits 1-26 through 1-28

Recent home buyers were more likely to own their previous home than rent a home or an apartment. As might be expected, 73 percent of first-time home buyers rented their previous living arrangement and 21 percent lived with friends and family. The share of first-time buyers who lived with friends and family before purchasing remained steady from last year, but is up from a low of 12 percent in 1993. In comparison, 76 percent (up from 72 percent in the previous year) of repeat buyers owned their previous residence and 18 percent rented.

With regards to household composition, married couples were more likely than other household types to own their previous residence at 59 percent. Unmarried couples were the most likely to rent a home before making a purchase at 56 percent, while single females were most likely to live with friends and family before buying. Those with children under the age of 18 living at home were more likely to own (50%) than rent (38%) prior to buying, while those without children were more definitively likely to own their previous home.

PRIMARY REASON FOR HOME PURCHASE AND TIMING OF PURCHASE

Exhibits 1-29 through 1-32

For first-time home buyers, 65 percent purchased for the desire to own a home of their own, compared to just nine percent for repeat buyers. Repeat home buyers bought for the following reasons: the desire to be closer to friends and family (15 percent), a desire for a larger home (14 percent), and the desire for a home in a better area (10 percent).

Forty-five percent of all buyers said that the timing was just right and they were ready to purchase a home (down from 51 percent last year). The second most common reason was that it was the best time because of mortgage financing options available (16 percent), followed by that the buyer did not have much choice and they had to purchase the home when they did (15 percent).

OWNERSHIP OF MULTIPLE HOMES

Exhibit 1-33

In 2021, the number of recent home buyers who own more than one home was 14 percent, down from 17 percent in 2020. The ability of a buyer to own an additional home besides the home they just purchased speaks to the tightened credit conditions as buyers who have higher incomes and own more than one property are more commonly making home purchases. Owning more than one property was the most common for buyers aged 45 years and older at 19 percent.

CHAPTER 2:

Characteristics of Homes Purchased

When choosing to purchase either a new or previously-owned home, buyers typically make their choice for specific reasons. Buyers of new homes typically were looking to avoid renovations or plumbing and electrical problems, as well as to have the ability to choose and customize design features. Buyers of previously-owned homes were looking for a better overall value in a home, and a better price.

Due to a lack of new home construction, the share of new homes purchased remained relatively low at 15 percent. Previously-owned home purchases remained at 85 percent, the same as last year. By way of comparison, in 1981 new home purchases made up 18 percent of the market share and previously-owned homes were 82 percent. New home purchases reached a high of 29 percent in 1989 and 28 percent in 2003.

The most frequently purchased housing type among all buyers was a detached single-family home. Single females and single males were the most likely to have purchased a townhouse or row house, over any other household type. The share of senior-related housing purchases was 14 percent in 2021, up slightly from last year.

Overall, buyers expected that they will live in their homes for 12 years. The expected tenure increased with age, and was also higher among repeat buyers. The biggest factor that would cause a buyer to move from their newly purchased home was due to life changes, including additions to their family, marriage, children moving out, or retirement. While 27 percent of buyers reported that life changes could cause them to move, 18 percent of recent buyers said that this was their forever home and had no intention of moving.

Chapter 2: Characteristics of Homes Purchased

NEW AND PREVIOUSLY OWNED HOMES PURCHASED

Exhibits 2-1 through 2-3

Due to a lack of new home construction, the share of new homes purchased remained somewhat low at 15 percent. Previously-owned home purchases remained at 85 percent. In comparison, in 1981 new home purchases accounted for 18 percent of the market share and previously-owned homes were 82 percent. New home purchases were most common in the South at 21 percent of all homes purchased (the same as last year), and just six percent of homes purchased in the Northeast were new construction.

Buyers chose to purchase new and previously-owned homes for different reasons. Purchasers of new homes were looking to avoid renovations and problems with plumbing or electricity (36 percent). New home buyers also liked having the ability to choose and customize design features in their home (35 percent), and having the amenities of new home construction communities (23 percent). Buyers who chose a previously-owned home were considering a better overall value (38 percent), a better price (35 percent), and a home with more charm and character (24 percent).

“Quality of the neighborhood (63 percent), convenience to friends and family (45 percent), convenience to job (42 percent), and overall home affordability (39 percent) were the most important factors to recent home buyers when choosing a neighborhood.”

TYPE OF HOME PURCHASED

Exhibits 2-4 through 2-7

The most common type of home purchased continued to be the detached single-family home, which made up 82 percent of all homes purchased, slightly up from 81 percent from last year. Seven percent of recent buyers purchased townhomes or row homes, and most frequently these homes were located in the urban/central city, suburb/subdivision, or small towns. The most popular location to purchase a single-family home was in a suburb/subdivision or small town.

Townhomes continued to be more common among first-time home buyers compared to repeat buyers. Single female and single male buyers were more likely to purchase a townhouse or condo than married couples and unmarried couples. Among buyers with children under the age of 18 in the home, 89 percent purchased a detached single-family home, as opposed to 80 percent of buyers who had no children in their home.

Since 1981, the *Profile of Home Buyers and Sellers* has been tracking data on the type of homes purchased. In 1981, 76 percent of home buyers purchased detached single-family homes, 16 percent bought condos, and eight percent bought townhomes. In 1985, the share of detached single-family homes purchased was at its highest at 88 percent and in 2007 it was at its lowest at 74 percent. For most of the 1980s and 1990s, detached single-family homes ranged in the low to mid 80 percentiles. By 2005 through 2012, the share of detached single-family homes sold ranged in the mid to high 70 percentiles. Since 2007, condo sales have steadily decreased from 11 percent, and made up four percent of sales in 2021.

LOCATION OF HOME PURCHASED

Exhibits 2-8 through 2-10

Among all regions, the largest percentages of homes were located in the suburbs or subdivisions, and in small towns. In the Northeast, 30 percent of recent buyers purchased a home in a small town, compared to 17 percent in the South. Sixty-two percent of buyers who purchased new homes did so in a suburb or subdivision. The location of buyers' previously sold home was similar to the location of their recently purchased homes. Sixty-seven percent of all buyers purchased homes that were located in the suburbs or a subdivision and subsequently sold a home that was also located in the suburbs or in a subdivision.

SENIOR HOUSING AND ACTIVE ADULT COMMUNITIES

Exhibit 2-11

Senior-related housing increased slightly to 14 percent of buyers over the age of 50 this year, and has incrementally increased from 11 percent in 2010. For buyers over 50 who recently purchased senior-related housing, 68 percent (up from 62 percent last year) purchased a detached single-family home and 50 percent (down from 52 percent last year) bought in a suburb or subdivision. Both categories were lower for buyers in senior-related housing than other types of buyers. Other home types purchased include townhomes and row homes at seven percent, and condos at 16 percent. The location of senior-related housing showed that other than in suburbs and subdivisions, 16 percent of buyers purchased in small towns (down from 19 percent last year), and 17 percent in resort or recreational areas (up from 13 percent last year). Only seven percent of buyers of senior-related housing purchased in rural areas.

DISTANCE BETWEEN HOME PURCHASED AND PREVIOUS RESIDENCE

Exhibit 2-12

The distance between the home that buyers recently purchased and their previous residence was a median of 15 miles. Regionally, buyers in the Midwest moved the shortest distance —just a median of 10 miles to their current residence. Buyers in the Northeast moved a median of 15 miles, buyers in the West moved a median of 18 miles, and those in the South moved the greatest distance, a median of 20 miles to their recently purchased home.

FACTORS INFLUENCING NEIGHBORHOOD CHOICE

Exhibits 2-13 through 2-14

Quality of the neighborhood (63 percent), convenience to friends and family (45 percent), convenience to job (42 percent), and overall home affordability (39 percent) were the most important factors to recent home buyers when choosing a neighborhood. In urban or central city locations and resort or recreational areas, convenience to entertainment or leisure activities and convenience to shopping were more important factors than in any other location. Single females more than any other household composition cited the convenience to friends and family as an influencing factor in their neighborhood choice at 53 percent. Half of recent buyers with children under the age of 18 living in their home cited quality of the school district as an influencing factor in their neighborhood choice.

PRICE OF HOME PURCHASED

Exhibits 2-15 through 2-18

Prices of homes that were purchased increased this year nationally to a median of \$305,000 from \$272,500 last year. The most expensive homes were found in the West, where the median price of a home purchased was \$450,000, up from \$400,000 last year. Homes in the Midwest were the most affordable at a median of \$246,900.

New homes were typically more expensive than previously-owned homes. The median price for a new home was \$365,000 (up from \$334,150 last year) and the median price for a previously-owned home was \$294,000 (up from \$260,000 last year). First-time buyers commonly purchased a home that was less expensive than the home that repeat buyers purchased. Repeat buyers purchased homes that were a median price of \$338,000, whereas first-time buyers purchased homes that were a median of \$252,000 (up from \$297,000 and \$230,000 last year, respectively).

Recent buyers typically purchased their home for a median of 100 percent of the asking price for their home. Twenty-nine percent of buyers paid more than the asking price for their home. Home buyers in the Northeast were able to get the largest discounts, where eight percent paid less than 90 percent of the asking price for their home.

“When deciding on a home to purchase, recent buyers made compromises on some home characteristics. The most common compromise made was the price of the home at 27 percent, followed by the condition of the home at 21 percent.”

Chapter 2: Characteristics of Homes Purchased

SIZE OF HOME PURCHASED

Exhibits 2-19 through 2-23

Recent homes purchased were a median size of 1,900 square feet this year. The size of homes that repeat buyers purchased was typically larger than homes purchased by first-time buyers. The median home size for first-time buyers was 1,640 square feet, and 2,020 square feet for repeat buyers. Single females and single males purchased the smallest sized homes, with medians of 1,510 and 1,650 square feet respectively. Married couples and households with children under 18 purchased the largest homes compared to any other household composition, with a median of 2,100 square feet and 2,200 square feet respectively.

The largest homes purchased were detached single-family homes, with a median of 2,000 square feet. In the South, the median home purchased was 1,980 square feet, which was larger than in any other region. The most expensive price per square foot was found in townhouses or row houses. The price per square foot in these homes was \$170. The next most expensive was apartment/condo in buildings with 5 or more units at \$160 per square foot. The typical home purchased this year had a median of three bedrooms and two bathrooms. Among households that have children under the age of 18 living in their home, there were a median of four bedrooms in the house.

YEAR HOME WAS BUILT

Exhibit 2-24

The typical home purchased was built in 1993, the same as the previous year. The South had the newest homes purchased, where the typical purchased home was built in 2002. The oldest built homes were found in the Northeast, where the median year built was 1972. .

ENVIRONMENT FEATURES AND COMMUTING COSTS

Exhibits 2-25 through 2-28

Commuting costs were at least somewhat important for 64 percent of buyers, while 34 percent said commuting costs were not important to them. Most recent buyers thought their home's environmentally friendly features were at least somewhat important to them. The most important environmental feature to buyers in all regions was heating and cooling costs, which 80 percent of buyers found at least somewhat important. As the home's age increases, buyers place less importance on environmentally friendly features compared to buyers of newer homes.

CHARACTERISTICS OF HOME ON WHICH BUYER COMPROMISED

Exhibits 2-29 through 2-31

When deciding on a home to purchase, recent buyers made compromises on some home characteristics. The most common compromise made was the price of the home at 27 percent, followed by the condition of the home at 21 percent. Twenty-seven percent of buyers said that they made no compromises when purchasing their home. Single female buyers were the most likely to not make compromises when choosing their home at 30 percent.

EXPECTED LENGTH OF TENURE IN HOME PURCHASED

Exhibits 2-32 through 2-35

The expected tenure in homes decreased to a median of 12 years. First-time and repeat buyers intended to stay in their homes for the same length of time as the previous year at 10 years and 15 years respectively. Buyers between the ages of 18 to 24 had the shortest expected tenure of six years, compared to buyers aged 45 to 64 who expect to stay in their homes for 18 years. While buyers estimate the timeframe that they will live in their homes, there are factors which could cause buyers to move. Twenty-seven percent of buyers said that they would potentially move because of a life change such as an addition to the family, marriage, children moving out, or retirement. Buyers between the ages of 18 and 24 were more likely than any other age group to potentially move for a larger home, and buyers between the ages of 25 and 44 because of a job change. Married couples and households with no children were the most likely at 20 and 19 percent, respectively, to say that they are never moving and that this is their forever home.

CHAPTER 3:

The Home Search Process

Starting the home buying process online continues to be the first step that many home buyers are taking. Forty-one percent of recent buyers first looked online for properties for sale, while 95 percent of all recent buyers used the internet at some point during the home search process. Searching for homes online is at an all-time high, as many buyers searched online rather than in person during the pandemic.

Since 1987, NAR has collected data on how many weeks buyers searched for the home they bought and how many homes they viewed. Today, buyers typically spent eight weeks searching for the home they purchased. From 2009 to 2013, the search time jumped up to twelve weeks, then came back down to 10 weeks in 2014 and remained there for five years, before dropping to eight weeks in 2020. In 2021, buyers typically looked at a median of eight homes before finding a home to purchase (three of which they viewed only online), compared to 12 homes in 1987.

Fifty-one percent of buyers ultimately found the home that they purchased through the internet. Real estate agents remain a vital part of the home search process and are the most used information source for home buyers, followed by mobile search devices. With tightened inventory and increased demand due to historically low mortgage rates, and the pandemic changing buyer needs, finding the right property remained the most difficult step in the home buying process. Overall, home buyers remained satisfied with the home buying process at 94 percent.

Chapter 3: The Home Search Process

THE FIRST STEP IN THE HOME BUYING PROCESS

Exhibits 3-1 and 3-2

Forty-one percent of home buyers looked online for properties for sale as their first step in the home buying process, while 19 percent of buyers first contacted a real estate agent. Repeat home buyers were more likely than first-time buyers to look online for properties for sale as a first step. First-time home buyers were more likely to look online for information about the home buying process or to talk to a friend or relative about the home buying process. Across all age groups, looking online for properties for sale was the first step taken, and highest among those aged 45 to 64.

INFORMATION SOURCES

Exhibits 3-3 through 3-6

Throughout the home search process, real estate agents continue to be the most used resource (87 percent), followed by mobile or tablet search devices at 74 percent. The use of yard signs and open houses as information sources increased slightly compared to last year, both of which have historically been used most frequently, after real estate agents and online sources.

Real estate agents and mobile or tablet search devices were the most frequently used information sources, followed by online video sites. Only 13 percent of recent home buyers rarely used, or did not use, a real estate agent. Agents were also seen as the most useful information source during the home search process at 72 percent.

THE SEARCH PROCESS

Exhibits 3-7 through 3-10

Buyers typically spent eight weeks searching for the home they purchased. Buyers typically looked at a median of eight homes before finding a home to purchase, three of which they viewed only online. In this year's report, buyers in the Northeast searched for the longest period at 12 weeks.

Buyers who used an agent typically spent two weeks searching before they contacted an agent. First-time buyers searched for a median of 10 weeks, while repeat buyers and buyers who used an agent searched for a median of eight weeks.

The internet remains the main source where buyers are finding the home that they purchased. In this year's report, 51 percent of recent buyers (same as 51 percent last year) first found their home through the internet. In 2010, just 10 years ago, only 37 percent of buyers found their home through the internet. Finding a home through a real estate agent has shifted from being the most common source for finding a property to the second most common source. Yard signs and home builders increased slightly from last year's levels, but have declined throughout the years with the rise of the internet as an information source.

Among all buyers, the most difficult step in the home buying process was finding the right home to purchase at 56 percent. For 18 percent of buyers, the most difficult step was the paperwork, and 15 percent cited the most difficult step was understanding the process and steps involved. While 18 percent of recent buyers had no difficult steps, this was much more common among repeat buyers and buyers of new homes.

“Sixty-one percent of recent buyers were very satisfied with their recent home buying process. Thirty-three percent of buyers were somewhat satisfied with the buying process.”

2021 Profile of Home Buyers and Sellers

INTERNET USAGE TRENDS

Exhibits 3-11 and 3-15

The share of home buyers who used the internet to search for a home remained high at 95 percent. The *Profile of Home Buyers and Sellers* started collecting data on the use of the internet for the home search process in 1995, when only two percent of buyers looked online. In 1997, that number jumped to 18 percent of home buyers who used the internet in their search. That number doubled over the years and by 2009, 90 percent of buyers used the internet at some point in their search. That share dropped a few percentage points in the next several years until 2012 when it slowly started going back up.

When asked where their internet searches were conducted, home buyers were split; they typically conducted 50 percent of their search on a desktop/laptop and 50 percent on a mobile device(s). Those aged 44 and younger were more likely to use mobile devices, and those 65 and older were more likely to use a desktop/laptop.

As a result of searching for a home online, 55 percent of buyers walked through the homes that they viewed online, and 38 percent looked at the exterior of these homes and drove through the neighborhoods. First-time buyers were the most likely to look for more information on how to get a mortgage as a result of searching online.

CHARACTERISTICS OF INTERNET SEARCHERS AND SOURCES USED

Exhibits 3-15 through 3-18

Buyers who used laptop/desktop computers more often were likely to use video sites and homebuilders in the home search process. Buyers who searched more often on a mobile device were more likely to find their home online.

WEBSITE FEATURES AND MOBILE SEARCH

Exhibit 3-19

Buyers who used the internet during their home search found photos (84 percent), detailed information about properties for sale (80 percent), floor plans (55 percent), real estate agent contact information (43 percent), and virtual tours (43 percent) to be very useful.

SATISFACTION IN BUYING PROCESS

Exhibit 3-20

Sixty-one percent of recent buyers were very satisfied with their recent home buying process. Thirty-three percent of buyers were somewhat satisfied with the buying process. Only seven percent of recent buyers were dissatisfied with the buying process.

CHAPTER 4:

Home Buying and Real Estate Professionals

Making the home purchase through a real estate agent is a consistent real estate trend that continued again this year. Eighty-eight percent of buyers in 2021 purchased their home through a real estate agent or broker, seven percent directly from a builder or builder's agent, and five percent from the previous owner. Looking back to 1981, 82 percent purchased through an agent, eight percent directly through a builder or builder's agent, and 10 percent from the previous owner. In 1987 and 2000, purchases directly from the owner were at a peak of 15 percent. In 1987 and 2000, seven in 10 buyers purchased through an agent. Since then, the share of those working with an agent to purchase a home has steadily grown over the years, peaking at 89 percent in 2011 and 2012 and hovering in the high 80 percent range before returning to 88 percent last year.

By household composition, single females purchased their homes through real estate agents and brokers at a higher rate than any other household composition at 89 percent. Thirty-eight percent of buyers of new homes purchased their home directly from a builder or builder's agent, but 60 percent used a real estate agent to purchase a newly built home. The majority of buyers who purchased a previously owned home bought their home through a real estate agent or broker; buying directly from the previous owner was the next most common purchase method.

Fifty-nine percent of recent buyers signed a disclosure agreement either at first meeting, when the contract was written, or at some other time. The most common arrangement was a written arrangement, followed by an oral arrangement. The most common compensation structure for real estate agents was payment through the seller, which was the case for over half of recent home buyers.

With housing inventory tight in nearly all areas of the country, buyers wanted help from their agent most on finding the right home to purchase. Buyers were also looking for help to negotiate the terms of sale and with price negotiations. The most common way that buyers found their real estate agent was through a referral by a friend, neighbor, or relative. Buyers typically interviewed only one real estate agent before working with them, and the most important factor was that the agent was honest and trustworthy. Recent buyers were overall very satisfied with their real estate agent's skills and qualities, and definitely would use their agent again or recommend them to others.

Chapter 4: Home Buying and Real Estate Professionals

METHOD OF HOME PURCHASE

Exhibits 4-1 through 4-4

Recent home buyers most commonly purchased their homes through a real estate agent or broker, at 87 percent. Seven percent purchased directly from the builder or builder's agent, while four percent purchased directly through the previous owner. By comparison, in 1981, 82 percent purchased through an agent, eight percent directly through a builder or builder's agent, and 10 percent from the previous owner. Buyers in the West had the highest percentage who purchased their homes through real estate agents or brokers at 90 percent.

Compared to buyers of previously owned homes, buyers of new homes purchased directly from the builder or builder's agent at a much higher rate: 38 percent of new home buyers did so. Single females (89 percent) were the household compositions that were most likely to purchase through a real estate agent or broker.

AGENT REPRESENTATION AND COMPENSATION

Exhibits 4-5 through 4-7

Fifty-nine percent of recent buyers signed an agent representation disclosure, either at the first meeting, when the contract was written, or at some other time. The most common arrangement was a written agreement at 40 percent, followed by an oral agreement at 17 percent. Only 27 percent of buyers had no representation arrangement with their agent, which is the same as last year.

Generally real estate agents were compensated through the seller at 55 percent, whereas only 22 percent of agents were compensated by the buyer only. When the agent was compensated by the buyer, they were most commonly paid a percentage of the sales price as opposed to a flat fee.

WHAT BUYERS WANT FROM AGENTS AND BENEFITS PROVIDED

Exhibits 4-8 through 4-11

What recent buyers wanted most from their agent was finding the right home to buy (52 percent). Buyers were also looking for someone who could help them negotiate the terms of sale (13 percent) and help with price negotiations (11 percent). First-time buyers were more interested in receiving help from their agent in determining how much they could afford than repeat buyers. Unmarried couples also wanted help negotiating the price (15 percent) more than any other household composition. Single females wanted help to find the right home (53 percent) more than any other household composition.

There were many benefits for buyers using a real estate agent, with the foremost reported as being the buyer(s) received help in understanding the buying process (63 percent). Pointing out unnoticed features or faults with the property was the next most important benefit (58 percent), especially to first-time home buyers (64 percent). Other benefits that their real estate agent contributed that were also important to buyers: providing a better list of services providers, negotiating better sales terms, and gaining improved knowledge of search areas.

“In general, buyers were very satisfied with their real estate agent’s skill and qualities, with 89 percent saying that they were very satisfied with their knowledge of the purchase process, as well as 88 percent saying that they were very satisfied with their agent’s responsiveness, honesty, and integrity.”

2021 Profile of Home Buyers and Sellers

FINDING A REAL ESTATE AGENT

Exhibits 4–12 through 4–15

Referrals were still by far the most common way for buyers to find the real estate agent that they worked with. Forty-seven percent of buyers used an agent that was referred to them by a friend, neighbor, or relative. Recent buyers also choose to work with agents that they had previously used to buy or sell a home (13 percent). Compared to repeat buyers, first-time buyers were more likely to find their agent through a referral (57 percent) or more likely to have inquired about a specific property online or a website without a specific reference (16 percent). Married couples were the most likely to use an agent that they had previously used to buy or sell a home (14 percent).

Seventy-three percent interviewed only one real estate agent during their home search. Nineteen percent of first-time buyers interviewed two agents before choosing the agent they ultimately worked with. Buyers typically reached out to their agent by phone (29 percent), in person (19 percent), and by e-mail (11 percent). Agents commonly responded to buyers on their first attempted contact.

FACTORS WHEN CHOOSING AN AGENT

Exhibits 4–16 through 4–20

The most important factor to recent buyers when choosing an agent was finding an agent that was trustworthy and honest, at 20 percent. Other important factors when choosing an agent included the agent's experience and their reputation.

When searching for an agent, buyers were looking for someone who was honest and had integrity, was responsive, had knowledge of the purchase process, and who had knowledge of the real estate market. Having an honest agent with integrity was the most important to buyers, and 97 percent of respondents considered this very important. Recent buyers also found it very important that their agent was responsive, had knowledge of the purchase process and real estate market, and had good communication and negotiation skills.

When thinking of agent communication practices, 74 percent of buyers felt that it was important that their agent call them personally to inform them of any activity. It was important for buyers that agents send postings as soon as a property was listed, the price changed or went under contract, and that they were able to communicate with their agent through text message.

SATISFACTION WITH AGENT

Exhibits 4–21 through 4–23

In general, buyers were very satisfied with their real estate agent's skill and qualities, with 89 percent saying that they were very satisfied with their knowledge of the purchase process, as well as 88 percent saying that they were very satisfied with their agent's responsiveness, honesty, and integrity. When asked if they would use their real estate agent again or recommend them to others, 90 percent of buyers would at least probably recommend their agent to others. Buyers have typically already recommended their agent once since purchasing their home.

“Recent home buyers most commonly purchased their homes through a real estate agent or broker, at 87 percent. Seven percent purchased directly from the builder or builder’s agent, while four percent purchased directly through the previous owner.”

CHAPTER 5:

Financing the Home Purchase

While many share the desire to own their own home, financing the purchase has a variety of obstacles, according to this year's survey responses. Eighty-seven percent of all buyers financed their homes last year, consistent with the prior year. This is, however, a decline from 93 percent in 2003. First-time buyers were more likely to finance their purchase at 96 percent, while only 83 percent of repeat buyers financed.

NAR has collected data since 1989 on the median downpayment. In 2021, the median downpayment was 13 percent for all buyers, seven percent for first-time buyers, and 17 percent for repeat buyers. Comparing this to previous years, in 1989 the median percent of the downpayment for all buyers was 20 percent, 10 percent for first-time buyers, and 23 percent for repeat buyers. For first-time buyers, the median downpayment has been 10 percent or below since 1989.

Savings remained a key source of the downpayment for home buyers, both for first-time and repeat buyers alike. Sixty-one percent of recent home buyers used their savings for their downpayment. Overall, this is still above the historical norm of 58 percent since 2000 when the report began tracking sources of the downpayment. Fifty-six percent of repeat buyers used the proceeds of their past home sale for a downpayment, while 28 percent of first-time buyers used a gift or loan from a family member or friend for their downpayment.

Sixty-five percent of buyers did not need to make any financial sacrifices to purchase their home, down slightly from 67 percent last year. The majority of first-time buyers did make financial sacrifices to purchase a home. For those who did, the most common sacrifices buyers reported were cutting spending on luxury goods, entertainment, and clothes.

While the number of home buyers who reported that obtaining a mortgage was more difficult than expected (30 percent in 2021) was considerably higher in the 2009 and 2010 reports, it has steadily decreased in the last few years. Conventional financing was the most common mortgage type, followed by FHA loans, primarily among first-time home buyers again this year.

Chapter 5: Financing the Home Purchase

BUYERS WHO FINANCED THEIR HOME

Exhibits 5-1 through 5-4

Eighty-seven percent of all buyers financed their homes last year, consistent with the prior year. This is, however, a decline from 93 percent in 2003. First-time buyers were more likely to finance their purchase at 96 percent, while only 83 percent of repeat buyers financed. Nearly all married couples that were first-time home buyers financed their homes at 97 percent compared to only 79 percent of single female repeat buyers.

This year, 10 percent of buyers financed 100 percent of the entire purchase price with a mortgage, a decrease from 14 percent last year. The median percent financed for first-time buyers was 93 percent compared to 83 percent for repeat buyers, which was about the same as last year. The median percent financed for all buyers across the board was 87 percent.

In 2021, the median downpayment was 13 percent for all buyers, seven percent for first-time buyers, and 17 percent for repeat buyers. In 1989, the median downpayment for all buyers was 20 percent, 10 percent for first-time buyers, and 23 percent for repeat buyers. The downpayment has either decreased or held steady since 2005, but the past two years have seen an increasing trend towards higher downpayments within a more competitive market, and more equity earned from the past sale of a home.

SOURCES OF DOWNPAYMENT

Exhibits 5-5 through 5-7

Sixty-one percent of recent home buyers used their savings to finance their home purchase, up slightly from 58 percent last year. Overall, this is above the historical norm of 58 percent since 2000. For repeat buyers, the proceeds from the sale of a primary residence was the most commonly cited way of financing a home purchase at 56 percent, up from 47 percent in 2014 and more than double the 25 percent in 2012. This is likely due to the continued increase in property values, allowing buyers to use equity from their previous home at higher rates. First-time buyers cited using savings (83 percent) and a gift or loan from relative or friend (28 percent).

Unmarried couples are the highest share using savings for a downpayment at 74 percent. Married couples and single females were the most likely to use proceeds from the sale of a primary home (44 percent and 35 percent respectively).

EXPENSES THAT DELAYED SAVING FOR A DOWNPAYMENT OR HOME PURCHASE

Exhibits 5-8 through 5-10

More than a quarter of buyers (27 percent) were delayed in purchasing a home by more than five years if they had debt that impeded them. The median length of time buyers waited to buy a home while saving for the downpayment and paying down debt was four years. Buyers were asked what difficulties they encountered in their home search and home buying process. The share that cited their most difficult step in the home buying process was saving for a downpayment was 13 percent this year, the same share as in 2020. These buyers were asked what expenses made saving for a downpayment difficult. Forty-three percent of these buyers reported student loans, 43 percent reported high rent/current mortgage payment, 33 percent credit card debt, and 32 percent car loans.

For first-time home buyers, 29 percent said saving for a downpayment was the most difficult step in the process. Of that share, 46 percent said student loan debt and 45 said high rent delayed them in saving for a home. Among the five percent of repeat buyers who reported that saving for a downpayment was the most difficult task, 35 percent reported that high rent or their current mortgage payment or credit card debt delayed them saving. Twenty percent of unmarried couples reported saving for a downpayment was the most difficult task in the home buying process. Of that 20 percent, 57 percent reported a high rent or current mortgage payment delayed their savings and 40 percent report their student loans.

“Buyers continue to see purchasing a home as a good financial investment. Eighty-six percent reported believing that a home purchase is a good investment and 43 percent said it was better than owning stock.”

2021 Profile of Home Buyers and Sellers

SACRIFICES MADE TO PURCHASE HOME

Exhibits 5-11 and 5-12

Some buyers chose to make financial sacrifices in order to make a home purchase. Sixty-five percent of buyers did not need to make any sacrifices. For all buyers, the most common sacrifices reported were a cut in spending on luxury or non-essential items (23 percent), a cut in spending on entertainment (16 percent), and a cut in spending on clothes (13 percent). First-time buyers were more likely to make sacrifices than repeat buyers—53 percent compared to 26 percent made sacrifices, respectively. Unmarried couples reported making the most financial sacrifices at 45 percent.

DIFFICULTY OF MORTGAGE APPLICATION AND APPROVAL PROCESS AND SOLD A DISTRESSED PROPERTY

Exhibits 5-13 through 5-17

Thirty percent of buyers said the mortgage application process was at least somewhat more difficult than expected and 22 percent said it was easier than expected. Forty-nine percent of buyers said that the mortgage application and approval process was no more difficult than expected. Twenty-five percent of first-time buyers said that the mortgage application and approval process was somewhat more difficult than expected, compared to 18 percent of repeat buyers. Unmarried couples were more likely than other groups to report the process was easier than expected at 26 percent.

Four percent of successful home buyers did have a mortgage application rejected from a mortgage lender before securing a mortgage. They typically had a median of one rejection. The most common reasons for the buyer reporting they were rejected was because of their debt-to-income ratio (32 percent), low credit score (23 percent), because their income was unable to be verified (11 percent), insufficient downpayment (eight percent), or not enough money in reserves (eight percent).

Twenty-three percent of all buyers reported having student loan debt. That number jumps to 37 percent for first-time buyers and drops to 16 percent for repeat buyers. The median amount of student loan debt for all buyers was \$30,000, \$30,000 for first-time buyers and \$30,000 for repeat buyers.

Six percent of recent buyers had a distressed property sale in the past—either a short sale or a foreclosure—and the typical year for a distressed sale was in 2011.

TYPE OF MORTGAGE LOAN

Exhibits 5-18 and 5-19

Ninety-four percent of all buyers used a fixed-rate mortgage. Sixty-nine percent of buyers chose a conventional loan to finance their home, up from 64 percent last year. Fifteen percent of buyers reported securing a FHA loan and nine percent chose a VA loan. First-time buyers sought FHA loans more commonly than repeat buyers at 23 percent compared to 10 percent. Repeat buyers largely used conventional loans at 74 percent, compared to 61 percent of first-time buyers.

BUYERS' VIEW OF HOMES AS A FINANCIAL INVESTMENT

Exhibits 5-20 and 5-21

Buyers continue to see purchasing a home as a good financial investment. Eighty-six percent reported believing that a home purchase is a good investment and 43 percent said it was better than owning stock. This is up from 83 percent in last year's report. Only three percent reported that it was not a good financial investment. Eighty-six percent of first-time buyers see owning a home as a sound financial endeavor which is the same share among repeat buyers. Unmarried couples are most likely to feel their home is a good financial investment at 88 percent.

“In 2021, the median downpayment was 13 percent for all buyers, seven percent for first-time buyers, and 17 percent for repeat buyers.”

CHAPTER 6:

Home Sellers and their Selling Experience

NAR has collected data on the median tenure in the home since 1985. In 1985, the median tenure was just five years. Over the past 30 years, sellers have remained in the same home for longer periods of time. In recent years, seller tenure increased to a high of 10 years. Given attractive financing and shifting priorities in homes, in 2021, the median tenure for sellers in their sold home decreased to eight years from 10 years in 2020. The decreased tenure in 2021 was the largest year-to-year shift since data has been collected.

Tightened inventory continues to cause prices to increase in many areas of the country. While housing inventory was reduced in many areas, sellers saw a favorable market where they typically received 100 percent of their asking price and usually sold their homes within just one week. This is the highest percent of received asking price recorded since 2002. The typical percent of received asking price ranged between 95 and 99 percent.

The share of home sellers who reported they delayed the sale of their home because their home was worth less than their mortgage has been kept low by increased home prices. That share of sellers dropped from seven percent in the 2019 report to six percent in 2020, and remained level in 2021. However, sellers who purchased their home 11 to 15 years ago continue to report stalling their home sale at higher rates—14 percent of sellers reported delaying their home sale. Joining this tenure group, 10 percent of sellers who purchased their home 16-20 years ago also reported stalling their sale.

The typical seller had \$85,000 in equity in their home when their home sold, in comparison to the purchase price of their home, which is a significant increase from a median of \$66,000 in 2020.

Chapter 6: Home Sellers and Their Selling Experience

HOME SELLER CHARACTERISTICS

Exhibits 6-1 through 6-6

The typical age of home sellers was 56 this year, the same as last year. The median income in 2020 for the typical household was \$112,300, up from \$107,100 just last year. Incomes in the Northeast were highest when compared by region.

The share of married couples selling their home was 69 percent this year, down slightly from 71 percent last year, which marks the second year of decline for this share, and the lowest level recorded. Single females who sold their home increased slightly this year to 17 percent. Of all homes sold on the market, 69 percent did not have children under the age of 18 residing in the home, an increase from 61 percent last year.

For all sellers, 89 percent identified as White or Caucasian and 98 percent of households speak English as their primary language.

HOME SELLING SITUATION

Exhibits 6-7 through 6-8

For repeat buyers, 24 percent sold their home in 2021, 50 percent in 2020, 14 percent sold in 2019 or earlier, and only two percent have not yet been able to sell. Six percent did not plan to sell their previous home. Two-thirds (68 percent) were repeat sellers, and the share of first-time home sellers was 32 percent.

HOME SOLD VS. HOME PURCHASED

Exhibits 6-9 through 6-20

The majority of home sellers in 2021 reported they purchased a home in the same state as they sold a home at 69 percent. Seventeen percent of home sellers moved to another region of the country, and 15 percent remained in the same region but moved to a nearby state. Half of the homes sold (50 percent) were located in the suburbs or a subdivision. Thirty-eight percent of the homes sold this year were located in the South region, 24 percent were in the Midwest region, 22 percent were in the West region, and 15 percent were in the Northeast.

Detached single-family homes were the most common homes sold at 78 percent, a decrease from 80 percent last year. Townhome and row houses sold at eight percent and multi-unit apartments or condos buildings sold at nine percent. Townhomes and condos were more common in urban and central city areas at 11 percent and 24 percent, respectively.

Forty-six percent of sellers traded up and purchased a home that was larger in size than what they previously owned, 28 percent bought a home that was similar in size, and 26 percent traded down and purchased a home that was smaller in size. Buyers 65 years in age and older downsized and purchased a home 100

square feet smaller. For buyers who were 54 years and younger, they purchased a home at least 400 square feet larger. The typical home had three bedrooms and two bathrooms, larger than the median of two bedrooms the year prior.

Sixty-one percent of all sellers purchased a home that was newer than their previous home. Twenty-three percent purchased a home the same age, and 20 percent purchased an older home. Forty-eight percent of sellers traded up to purchase a more expensive home than the home they just sold, 29 percent purchased a less expensive home, and 28 percent purchased a home similar in price. Buyers who are 64 and younger typically bought a more expensive home than the one they just sold. Buyers aged 35 to 44 bought the most expensive trade-ups this year by an increase of \$101,000. Buyers aged 65 and over typically bought a less expensive home.

For all sellers, the most commonly cited reason for selling their home was the desire to move closer to friends and family (18 percent), followed by the home was too small (17 percent), their neighborhood becoming less desirable (11 percent), a change in family situation (nine percent), and the home was too large (nine percent). For sellers that moved the greatest distances, the primary reasons were moving closer to friends and family and to relocate for a job. For sellers moving within 10 miles, the most common reason was that the home was too small. First-time sellers were most likely to sell because their home was too small (30 percent), and repeat sellers were most likely to sell to be closer to friends and family (20 percent).

SELLER STALLED HOME SALE

Exhibits 6-21 and 6-22

Six percent of recent sellers stalled or delayed their home sale because their home was worth less than their mortgage. Ninety-four percent were able to sell when they wanted to. Seven percent of first-time buyers stalled but lived in the home, compared to four percent for repeat buyers. Fourteen percent of those who purchased their home 11 to 15 years ago reported stalling or waiting to sell the home.

2021 Profile of Home Buyers and Sellers

TENURE IN HOME

Exhibits 6–23 through 6–25

The median number of years a seller remained in their home was eight years, down from 10 years in 2020. That number was still higher than reported in 2000 to 2008 where the tenure in the home was only six years. The highest tenure in a home was for detached single-family homes, where sellers typically lived for nine years, followed by mobile or manufactured homes which were sold typically after eight years. Sellers who were 18 to 34 years of age had the shortest tenure in their homes—selling after four years, compared to those aged 55 to 64 who typically remained in their homes for 10 years.

DISTANCE MOVED

Exhibits 6–26 and 6–27

The purchasing habits of sellers led them to buy close to where they previously lived, moving a median of 20 miles away. In the Midwest and Northeast, sellers typically moved within 15 and 20 miles respectively, compared to 25 miles in the South and 40 miles in the West. This trend varied with age, where sellers between 35 to 44 years only moved within 10 miles. Sellers of 65 to 74 years moved the furthest at a median of 50 miles and moved over 100 miles away 44 percent of the time.

METHOD OF SALE

Exhibits 6–28 through 6–31

Ninety percent of home sellers worked with a real estate agent to sell their home, a slight increase from 89 percent last year. The share of FSBO sales remains below the historic norm at seven percent this year. From 2001 to 2008, FSBO sales ranged from 12 percent to 14 percent. Working with an agent was highest in the West and Northeast at 94 and 92 percent, respectively, and lowest in the Midwest and South at 87 and 90 percent, respectively. FSBO sales were highest in the Midwest and Northeast at 10 and eight percent, respectively. Less than one percent of recent sellers used an iBuyer program to sell their home.

The method of sale tends to differ in conjunction with the relationship between the buyer and seller. If the buyer and seller know each other, the sale can be either an arms-length transaction consistent with local market conditions or it may involve considerations that would be not be relevant in the absence of a prior relationship.

Of all home sellers, only eight percent reported that they knew the buyer of their home. Among those sellers that sold their home themselves, 55 percent knew the buyer. In contrast, 96 percent of sellers that were assisted by an agent did not know the buyer.

Chapter 6: Home Sellers and Their Selling Experience

SALES PRICE AND TIME ON THE MARKET

Exhibits 6-32 through 6-37

For recently sold homes, the final sales price was a median 100 percent of the final listing price, which was consistent across all regions. This is the highest recorded median since 2002. For all sellers, time on market decreased this year to a median of just one week, from three weeks in 2020. Time on the market and the ratio of sales price to listing price have a strong relationship; generally, the longer a home is on the market the greater the discount from the listing price upon sale. Homes that were on the market for two weeks or less received a median of 100 percent of their asking price. Forty-three percent of sellers who sold their home in less than a week, sold for more than the asking price. Homes that were on the market for 17 weeks or more typically received 95 percent of the sale price compared to the listing price. Sixty-two percent of sellers reported their home was on the market for two weeks or less.

Homes which are on the market longer tend to reduce their listing price. Ninety-six percent of homes that were listed on the market for less than one week did not reduce their asking price. For homes that were listed for three to four weeks, 35 percent reduced their asking price overall and 28 percent reduced the asking price only once. For homes on the market for 17 weeks or more, only 17 percent were sold at the initial asking price.

“Ninety percent of home sellers worked with a real estate agent to sell their home, a slight increase from 89 percent last year. The share of FSBO sales remains below the historic norm at seven percent this year.”

INCENTIVES TO PROSPECTIVE BUYERS

Exhibits 6-38 and 6-39

Given the buyer demand, only 26 percent of all sellers offered incentives to attract buyers, a significant decrease from 46 percent last year. This varies by region, and was the most common in the South, Midwest, and West and less likely in the Northeast. Home warranty policies followed by assistance with closing costs were the top two listed incentives when selling a home. As might be expected, the longer a home is on the market, the more likely the seller is to add an incentive. For homes that were listed on the market for over 17 weeks, 43 percent offered some kind of incentive compared to only 13 percent of homes that were listed for less than one week.

EQUITY BY TENURE

Exhibit 6-40

This year, home sellers cited that they sold their homes for a median of \$85,000 more than they purchased it, up significantly from \$66,000 the year prior. This accounted for a 41 percent price gain, up from 33 percent the year prior. Generally, the longer a seller is in the home the greater the increase attributable to price appreciation. Sellers who owned their homes for eight to 10 years reported roughly selling their homes for \$103,900 more than they purchased it. That number dropped to \$67,000 between 11 and 15 years, and then increased again. Homes sold after 21 years reported a price gain of \$182,400.

SATISFACTION WITH THE SALES PROCESS

Exhibit 6-41

Seventy percent of sellers were 'very satisfied' with the selling process. Twenty-two percent were somewhat satisfied. Nine percent were dissatisfied with the process.

(Percentage Distribution)

CHAPTER 7:

Home Selling and Real Estate Professionals

While the home search process has shifted toward digital technology, the need for a trusted real estate agent to help sell a home is still paramount. Personal relationships and connections remained the most important feature of the agent-buyer/seller bond. Sellers most commonly found their real estate agents through referral by a friend, neighbor, or relative.

Sellers placed a high importance on the reputation of the agent when looking to hire, and trustworthiness and honesty were also at the top of the list. In 2006 when data collection started on the level of service provided by real estate agents, 83 percent of agents provided a broad range of services and the management of most aspects of the home sale, nine percent provided limited services as requested by the seller, and eight percent listed the home on the MLS with few other services provided. The share of sellers that want an agent who provides a broad range of services has increased some over time. In 2021, 86 percent of agents also provided a broad range of services and the management of most aspects of the home sale, eight percent provided limited services as requested by the seller, and six percent listed the home on the MLS with few other services provided.

Sellers placed high priority on the following four tasks: price the home competitively (21 percent), help market the home to potential buyers (20 percent), sell the home within a specific timeframe (16 percent), and help fix the home to sell for more (16 percent). While the top three priorities of sellers have stayed relatively the same, there is an increase in recent years of sellers who want help understanding how to fix up the home for sale.

Client referrals and repeat business were the predominant ways sellers found their real estate agent. Most sellers—89 percent—said that they would definitely (74 percent) or probably (15 percent) recommend their agent for future services.

Chapter 7: Home Selling and Real Estate Professionals

FINDING A REAL ESTATE AGENT

Exhibit 7-1 through Exhibit 7-4

Sixty-eight percent of recent sellers used an agent that was referred to them or used an agent they had worked with in the past to buy or sell a home. Nearly half of first-time sellers worked with an agent that was referred to them by a friend or family member to sell their home (47 percent). For repeat buyers, many used an agent they previously worked with (31 percent).

Eighty-two percent of recent sellers contacted only one agent before finding the right agent they worked with to sell their home, up from 77 percent last year.

Fifty-three percent of recent home sellers used the same real estate agent to represent them purchasing their home as selling their home. That number jumps to 85 percent for all sellers within 10 miles of their home purchase. If the seller was more than 50 miles away, they typically used a different agent for each real estate transaction.

HOME LISTED ON MULTIPLE LISTING SERVICE AND LEVEL OF SERVICE

Exhibits 7-5 through Exhibit 7-6

Eighty-nine percent of sellers listed their homes on the Multiple Listing Service (MLS), which is the number one source for sellers to list their home. Only four percent opted not to list on a MLS.

Real estate agents provide a wide range of services and conduct the management of most aspects of the home sale. Eighty-six percent of sellers reported that their agents provided a broad range of services within the home sale. Eight percent of sellers note that their agent only provided a limited set of services and six percent said their agent listed the home on a MLS but performed few other services. By way of comparison, in 2006 when data collection started on this question, 83 percent of agents provided a broad range of services and the management of most aspects of the home sale.

WHAT SELLERS MOST WANT AND FACTORS FOR CHOOSING AN AGENT

Exhibit 7-7 through 7-8

Sellers placed high priority on the following five tasks: price the home competitively (21 percent), help market the home to potential buyers (20 percent), sell the home within a specific timeframe (16 percent), help fix the home to sell for more (16 percent), and find a buyer for home (12 percent). In recent years, helping a seller understand how to fix up the home for sale has become more important to sellers.

The reputation of the real estate agent was by far the most important factor when sellers selected an agent to sell their home (32 percent). Sellers also placed value on the agent's trustworthiness and honesty (19 percent) and whether the agent was a friend or family member (17 percent).

METHODS USED TO MARKET THE HOME

Exhibit 7-9

Real estate agents listed homes on MLSs first and foremost (86 percent). They also posted yard signs (59 percent), listed on realtor.com (49 percent), listed the home on their own website (48 percent), listed on third party aggregators (45 percent), hosted open houses (43 percent), and listed on their company's website (42 percent). Real estate agents also listed homes on social media (22 percent, in line with last year).

AGENT'S PERFORMANCE AND COMPENSATION Exhibit 7-10 through 7-13

Agents received compensation predominantly from sellers at 76 percent. Of that compensation, 92 percent of sellers paid a percent of the sales price. Only a small fraction paid a flat fee (four percent), and only 12 percent of overall compensation was paid by both the buyer and seller. Seven percent of sellers reported buyers paying as the only means of compensation.

The real estate agent most often initiated the discussion of compensation (47 percent). The client initiated the discussion and the agent was able and willing to negotiate 20 percent of the time. Fifteen percent of the time, the client did not know that commissions and fees could be negotiated.

Client referrals and repeat business were the predominant sources of business for real estate agents. Most sellers—89 percent—said that they would definitely (74 percent) or probably (15 percent) recommend their agent for future services. Regardless of distance moved, recommendations remained strong. The typical seller (69 percent) has recommended their agent twice since selling their home, in the last year. Twenty-seven percent of sellers recommended their agent four or more times since selling their home.

CHAPTER 8:

For-Sale-by-Owner (FSBO) Sellers

In 1981, FSBO home sales accounted for 15 percent of all sales, and agent-assisted sales accounted for 85 percent. In 1985, FSBO sales peaked in the data set at 21 percent of all sales. FSBO sales have declined over time and in 2021, FSBO sales accounted for seven percent of total home sales, down from eight percent last year. This is close to the lowest share since the *Profile of Home Buyers and Sellers* data collection began. Regardless of tightened housing inventory, sellers rely on agents to sell their home rather than marketing on the open market. Among FSBO sellers, the majority know the buyer of their home. In 2021, four percent of FSBO sellers knew the buyers for their homes and three percent did not know the buyer.

FSBO sellers that knew the buyer predominantly sold to a friend, relative, or neighbor. FSBOs typically sold for less than the selling price of other homes. For FSBO sellers, those who knew the buyer tended to have lower median household incomes compared to those who did not know the buyer. Where FSBO sellers knew the buyer, the time on market for the home was usually less than a week, and sellers received 100 percent of the asking price.

Chapter 8: For-Sale-by-Owner (FSBO) Sellers

FSBO and Agent Assisted Sales, By Location and Over Time

Exhibits 8-1 and 8-2

Ninety percent of sellers sold with the assistance of a real estate agent, up slightly from 89 percent last year, and only seven percent were FSBO sales. In 1981, FSBO sales accounted for as much as 15 percent of sales. In 1985, FSBO sales peaked in the data set at 21 percent of all sales. This year, four percent of sellers knew the buyers and three percent of FSBOs buyers and sellers had no previous relationship. FSBO sales were highest in rural areas at 12 percent and in small towns at 10 percent, compared to only four percent in urban areas or central cities.

Characteristics of Sellers and Homes Sold

Exhibits 8-3 through 8-6

The median age for FSBO sellers was 55 years, compared to 56 for agent-assisted sellers. Seventy-one percent of FSBO sellers were married couples and the median income for all FSBO sellers was \$106,300. For FSBO sellers, those who did not know the buyer tended to have higher median household incomes compared to those who did know the buyer. Those who had an agent-assisted sale had the highest median income of \$114,300.

A majority of all homes sold were detached single-family homes at 78 percent. FSBO homes were also predominantly detached single-family homes at 77 percent, yet were also more likely to be mobile or manufactured homes at five percent compared to only two percent of agent-assisted sales. Among agent-assisted sales, 78 percent of all homes sold were detached single-family homes, which is slightly down from 81 percent last year. Twenty-one percent of FSBO sales were located in rural areas compared to only 12 percent of agent-assisted sales in rural areas. Most agent-assisted sales were located in suburban areas at 51 percent.

FSBOs typically sell for less than the selling price of other homes; FSBO homes sold at a median of \$260,000 in 2021 (up from \$217,900 in 2020), and still far lower than the median selling price of all homes at \$314,500. Agent-assisted homes sold for a median of \$318,000. FSBOs and agent-assisted sales both typically received 100 percent of their asking price. Sellers who began as a FSBO, then ended up working with an agent, received 98 percent of the asking price, but had to reduce their price the most before arriving at a final listing price.

The Selling Process for FSBO Sales

Exhibits 8-7 through 8-10

FSBO sellers priced their homes using a number of different sources and methods. For FSBO sellers who knew their buyers, the most common ways they priced their homes were by appraisals (40 percent), by comparisons to recent home sales in their area (38 percent), by the profit the seller needed from the sale (18 percent), and from an online home evaluation tool (17 percent). For FSBO sellers who did not know their buyers, the most common ways they determined their home price were comparisons to recent home sales in their area (61 percent), by online home evaluation tools (26 percent), by the profit the seller needed from the sale (20 percent), and by attending open houses in the area (15 percent).

FSBO homes sold on a similar timeline as compared to agent-assisted homes. Most FSBO homes typically sold in less than two weeks. For sellers that knew the buyer, their homes sold in less than a week (63 percent, up from 52 percent in 2020). The median number of weeks FSBOs were on the market was one, in line with last year. Agent-assisted homes also typically sold in a median of one week, down from three weeks in 2020. For sellers that started as FSBO and then were agent-assisted, the median number of weeks on the market was 12.

FSBO sellers were most likely to report not needing to sell urgently in comparison to agent-assisted sellers. FSBO sellers who did not know the buyer were most likely to not need to sell urgently (69 percent). It was not common for FSBOs to use incentives to sell their homes (88 percent of all FSBOs did not offer any incentives). Ninety-four percent of sellers who knew the buyer used no incentives. Agent-assisted sellers offered home warranty policies (14 percent) and assistance with closing costs (nine percent) to help sell their homes, which is lower than last year.

2021 Profile of Home Buyers and Sellers

Reasons for FSBOs, Marketing, and Sellers Experience

Exhibits 8-11 through 8-16

For 63 percent of FSBO sellers that knew the buyer the main reason to sell via FSBO was because they sold to a relative, friend, or neighbor. Of FSBO sellers that sold to a buyer they knew 25 percent did not want to pay a commission or fee. For FSBO sellers that did not know the buyer, 60 percent sold this way because they did not want to pay a commission or fee, and 12 percent because the buyers contacted the sellers directly.

Of all sellers, 94 percent sold when they wanted to list on the market. FSBO sellers that knew the buyer were the most likely to want to sell but were delayed because their home was worth less than the mortgage.

Yard signs, third party aggregators, and using friends, relatives, and neighbors were the most common marketing methods for FSBOs. When FSBO sellers knew the buyer, 43 percent did not need to market their home. Preparing and fixing the home up for sale, getting the price right, and understanding and performing the paperwork were the most difficult steps for FSBO sellers.

For FSBO sellers who knew the buyer, 33 percent said they would use an agent to sell their current home. Of FSBO sellers who did not know the buyer, 48 percent said they would sell their current home themselves. Eight in 10 successful FSBO sellers were very satisfied with the process of selling their home.

2021 Profile of Home Buyers and Sellers

METHODOLOGY AMONG RECENT BUYERS AND SELLERS

In July 2021, NAR mailed out a 129-question survey using a random sample weighted to be representative of sales on a geographic basis to 129,800 recent home buyers. The recent home buyers had to have purchased a primary residence home between July of 2020 and June of 2021. A total 5,795 responses were received from primary residence buyers. After accounting for undeliverable questionnaires, the survey had an adjusted response rate of 4.5 percent.

Respondents had the option to fill out the survey via hard copy or online. The online survey was available in English and Spanish.

Consumer names and addresses were obtained from Experian, a firm that maintains an extensive database of recent home buyers derived from county records. Information about sellers comes from those buyers who also sold a home.

All information in this Profile is characteristic of the 12-month period ending June 2021, with the exception of income data, which are reported for 2020. In some sections comparisons are also given for results obtained in previous surveys. Not all results are directly comparable due to changes in questionnaire design and sample size. Some results are presented for the four U.S. Census regions: Northeast, Midwest, South, and West. The median is the primary statistical measure used throughout this report. Due to rounding and omissions for space, percentage distributions may not add to 100 percent.

Data gathered in the report is based on primary residence home buyers. From the *Realtors Confidence Index*, 85 percent of home buyers were primary residence buyers in 2020, which accounts for 5,502,900 homes sold in 2020 (accounting for new and existing homes). Using that calculation, the sample at the 95 percent confidence level has a confidence interval of plus-or-minus 1.29%.
